The Nigeria Child Labour and Forced Labour Survey 2022, with total cost of N124,027,670.00 (USD 298,351.42), is partially provided by the ILO's projects "Accelerating action for the elimination of child labour in supply chains in Africa" (ACCEL Africa project), funded by the Ministry of Foreign Affairs of the Netherlands, under the cooperative agreement RAF/18/08/NLD; and partly provided by the project "Measurement, awareness-raising and policy engagement to accelerate action against child labour and forced labour" (MAP16 project), funded by the United States Department of Labor (USDOL) under cooperative agreement No. IL-30147-16-75-K-11 (GLO/18/29/USA). Sixty-Seven percentage of the total costs of the survey is financed with federal funds, for a total of USD 200,000 dollars, being 0.8 percent of the total budget of MAP16 project totalling USD23,945,000.

This publication does not necessarily reflect the views or policies of the Ministry of Foreign Affairs of the Netherlands or the USDOL, nor does mention of trade names, commercial products, or organizations imply endorsement by the Governments of the Netherlands or the United States.

► Foreword

The success of the Nigeria Child Labour and Forced Labour Survey 2022 would not have been possible without the commitment and contribution of various individuals and organizations who actively participated in the development of this document.

The National Bureau of Statistics (NBS) expresses our deepest appreciation in particular to the leadership of the Federal Ministry of Labour and Employment, ably led by Rt Honourable Barr Nkeiruka Onyejeocha, PHD, OON, Minister of State, for the collaboration and participation of the ministry during the conduct of the survey.

Profound gratitude goes to the International Labour Organization (ILO) for its technical and financial support, through the Accelerating action for the elimination of child labour in supply chains in Africa (ACCEL Africa) project and the Measurement, awareness-raising and policy engagement to accelerate action against child labour and forced labour (MAP16) project; and to the Government of the Netherlands and the United States Department of Labor (USDOL) for funding the ACCEL Africa and MAP16 projects, respectively, through which this survey report was designed and produced. The NBS sincerely appreciates the coordinating support of the Director of the ILO Country Office for Nigeria, Dr Vanessa Phala.

Finally, the Nigeria Child Labour Survey report was successfully developed through coordinating leadership provided by the Director of the Demography and Household Statistics Department, NBS, Alhaji Mohammed Musa, who spearheaded the working group comprising staff of the NBS, the Federal Ministry of Labour and Employment, the ACCEL Africa/ILO team led by Dr Agatha Kolawole, and the Research and Evaluation Unit (ILO FUNDAMENTALS). The tremendous and immense effort in the entire process of bringing this Nigeria Child Labour Survey 2022 report to fruition is highly appreciated.

It is the hope of the NBS that the information contained in this report will be a useful reference for the pursuit of effective policy actions towards the elimination of child labour and forced labour in Nigeria.

► Executive summary

This report aims to assess the prevalence of child labour in Nigeria and analyse the interaction between child labour, schooling and children's well-being. Using data collected by the National Bureau of Statistics in collaboration with the ILO and the Federal Ministry of Labour and Employment of Nigeria in the Nigeria Child Labour and Forced Labour Survey (NCFLS) 2022, this report also examines the patterns of child employment, the conditions of this employment and the key household characteristics that may contribute to child employment and child labour.

More than 62.9 million children 5 to 17 years old live in Nigeria, representing 30.3 per cent of the population. The NCFLS data was collected from a nationally representative sample of 16,418 households. The survey shows that more children live in rural areas than urban areas: 62.4 per cent (39,252,721) reside in rural areas compared to 37.6 per cent (23,647,758) in urban areas.

The current survey allowed for the classification of children 5 to 17 years old into four mutually exclusive categories: children who are exclusively working, children who are exclusively in school, children who are working and in school, and children who neither work nor go to school. The survey indicates that among the 5–14 age group, 42.3 per cent are full time students who are not engaged in any form of economic activity, 35.3 per cent are in school and working simultaneously, and 11.2 per cent are working only. Among the 15–17 age group, a larger proportion of children are working only, at 21.9 per cent of the population of that age. Furthermore, only 24.7 per cent are exclusively in school and 45.3 per cent are working and in school.

Since one of the survey's main objectives is to measure child labour, it is important to understand the legislative structure surrounding child labour in Nigeria. In the country, the Child Rights Act (2003) prohibits children in the 5–11 age group from engaging in any economic activity but allows children 12 to 14 years olds to engage in light work, while those in the 15–17 age group

are allowed to be involved in economic activities that are not hazardous.

The survey shows that 24,673,485 children 5 to 17 years old (39.2 per cent) are in child labour; of children in child labour, 60.8 per cent (14,990,674) are in the 5–11 age group, 20.8 per cent (5,132,574) are in the 12–14 age group and 18.4 per cent (4,550,237) are in the 15–17 age group (table A.7). A slight percentage difference can be seen in the prevalence of child labour between males (39.6 per cent) and females (38.8 per cent). The disparity between children residing in rural and urban areas is high; while 44.8 per cent of children in rural areas are involved in child labour, 30.0 per cent of children in urban areas are involved in child labour.

Substantial differences are evident by age group in children's involvement in economic activity, child labour and hazardous work. Overall, of children 5 to 17 years old, 50.5 per cent (31,756,302 children) are engaged in economic activity, 39.2 per cent (24,673,485) are involved in child labour and 22.9 per cent (14,390,353) are involved in hazardous work. For the 5–11 age group, 40.7 per cent (14,990,674) are in economic activity and, therefore, the same number and percentage of children of that age are in child labour as children under the age of 11 cannot work,¹ and 15.8 per cent (5,824,667) are in hazardous work. For children in the 12–14 age group, 61.9 per cent (8,583,312) are in economic activity, 37.0 per cent (5,132,574) are in child labour and 29.0 per cent (4,015,447) are in hazardous work. Among the children in the 15–17 age group, 67.1 per cent (8,182,316) are in economic activity and 37.3 per cent (4,550,237) are in child labour since, for this age group, only children that are in hazardous work are considered as being in child labour. Therefore, 37.3 per cent (4,550,237) also represents the percentage of 15- to 17-year-olds in hazardous work.

The involvement in economic activity of children in child labour can be broken down into three distinct non-mutually exclusive forms of work:

¹ According to the national legislation, any child below the age of 12 in any economic activity is in child labour. Therefore, the number of children 5 to 11 years old in economic activity equals child labour.

employment, own-use production and unpaid trainee work. Of the children in child labour, 24.2 per cent are in employment, 93.8 per cent are involved in own-use production and 11.3 per cent are involved in unpaid trainee work.

Focusing on children in child labour who are in the form of work qualified as employment allows an analysis of their involvement in child labour by the branch of economic activity in which they are employed (agriculture, industry or services). Most of the children 5 to 17 years old in child labour who are in employment work in the agriculture sector (56.8 per cent). Of the remaining children in employment and child labour, 25.8 per cent are

employed in the service sector and 17.4 per cent are employed in the industry sector.

This survey also provides information on how school attendance interacts with child labour. The results show that school attendance is negatively affected by child labour. A total of 81.4 per cent of children 6 to 14 years old not in child labour attend school, while this figure falls to 75.1 per cent for children in child labour.

A final important facet of the survey is the information it provides on the instance of injury among children in child labour. Of these children, 16.3 per cent have experienced an injury in the workplace. This reveals that many children experience direct harm from their involvement in child labour.

► Introduction

This report assesses the magnitude of the child work and child labour phenomena in Nigeria and the extent of their interaction with schooling and child well-being based on the results of the Nigeria Child Labour and Forced Labour Survey (NCFLS) 2022. The report also examines the characteristics of child work, child labour and hazardous work, such as forms of work, branch of economic activity, status in employment and time intensity, by key individual and household background variables, such as age group and sex. The NCFLS was conducted by the National Bureau of Statistics (NBS) with technical and financial assistance from the ILO through two undertakings: the Accelerating action for the elimination of child labour in supply chains in Africa (ACCEL Africa) project, and the Measurement, awareness-raising and policy engagement to accelerate action against child labour and forced labour (MAP16) project, funded by the Ministry of Foreign Affairs of the Netherlands and the United States Department of Labor, respectively.

The overall objective of the NCFLS is to generate quantitative data on Nigeria's labour market and children's activities in the country, including schooling and economic and non-economic activities.

The NCFLS's specific objectives are:

- to collect information on the scale, characteristics, nature and causes of child labour in Nigeria, and to determine the conditions of work and their effects on the health, education and development of children;
- to provide solid, quantitative information critical to plan actions against child labour in Nigeria with, against this background, this report's dissemination and presentation to the Government, employers' and workers' organizations, international partners,

non-governmental organizations (NGOs) and the general public to enhance the knowledge and understanding required to promote a sustainable, multidisciplinary campaign against child labour;

- to contribute to monitoring the child labour phenomenon by establishing a quantitative information system (database) on child labour that will be updated on a regular basis as new information becomes available through additional surveys and administrative records;
- to provide a comprehensive analysis of the state of children working in Nigeria by identifying priority groups and patterns and analysing working conditions and their effects on children in order to produce input for the development of policies and action programmes for the elimination of child labour;
- to integrate Nigeria's data into the ILO's child labour database.

This report comprises 11 chapters including information on the context in Nigeria (Chapter 2), the definition of child labour, and national legal frameworks and laws the Government has adopted to protect children in the country (Chapter 3) and child labour prevalence (Chapter 4). It also summarizes household and community factors associated with child labour (Chapter 5), the characteristics of child labour (Chapter 6), the amount of time children spend engaged in child labour (Chapter 7), child labour's impact on schooling (Chapter 8), its impact on health (Chapter 9), children's involvement in household chores (Chapter 10), and the national priorities to eliminate child labour (Chapter 11). Survey findings are outlined in Annex 1 and the survey methodology is described in Annex 2.

▶ 2

► National context

The Federal Republic of Nigeria is a country in West Africa. It is situated between the Sahel to the north and the Gulf of Guinea to the south in the Atlantic Ocean. It covers an area of 923,769 square kilometres (356,669 square miles) and has a population of over 216 million people. As the largest economy in Africa, Nigeria has significant potential and an important role to play in the economic revival of the entire African continent.

In the last 20 years, Nigeria's economic growth has been mostly positive, peaking at 15.3 per cent in 2002, with periods of mild recession in 2016 (-1.6 per cent) and 2020 (-1.8 per cent).² The country's poverty rate is high with 40.1 per cent of the population living below the national poverty line (table 1).³ There are large regional differences in the distribution of poverty. 76.3 per cent of the population of people living below the \$1.90 a day poverty line lives in the northern parts of Nigeria and 84.6 per cent of the same population live in rural areas.⁴ Human capital underdevelopment is also prevalent in these high-poverty regions, signalling a connection between poor education, poor health access and poverty.

According to the African Development Bank Group, "Nigeria's economy grew by 3.6 per cent in 2021 from a 1.8 per cent contraction in 2020, underpinned on the supply side by a 4.4 per cent expansion in the non-oil sector against an 8.3 per cent contraction in the oil sector; non-oil growth was driven by agriculture (2.1 per cent) and services (5.6 per cent). On the demand side, public and private consumption were contributors to GDP [gross domestic product] growth. Per capita

income grew by 1.0 per cent in 2021. The fiscal deficit narrowed to 4.8 per cent of GDP in 2021 from 5.4 per cent in 2020, due to a modest uptick in revenues, and was financed by borrowing."⁵ Public debt amounted to \$95.8 billion in 2021, or approximately 22.5 per cent of GDP.⁶

In August 2020, the labour force survey under COVID-19 conducted by Nigeria's NBS, responsible for providing "reliable and timely information" to the government and policymakers, indicated an unemployment rate in Nigeria of 27.1 per cent in the second quarter of 2020 compared to 23.1 per cent in the third quarter of 2018.⁷ According to this source, the unemployment rate increased to 33.3 per cent in the fourth quarter of 2020. The unemployment rate among rural dwellers was 34.5 per cent, while that of urban dwellers was 31.3 per cent. Unemployment among the young population (15- to 34-year olds) was 33.3 per cent.

In 2022, the Nigeria Human Development Index was 0.548 positioning the country within the lower-middle range on a global scale.⁸ Nigeria has the highest number of youngsters in the world out of formal schooling (at least 10.2 million at the primary level), although formal primary education is officially free and compulsory.⁹ The Federal Government has acknowledged the grim situation and has pledged to increase annual domestic education expenditure by 50 per cent by 2023 and by 100 per cent by 2025. This increase will amount to 7.2 per cent of the national budget allocation, although the common international benchmark on education spending is 15–20 per cent of national budgets.

2.1 Characteristics of the child population

Among children aged 5 to 17 years old, 58.6 per cent are in the 5–11 age group, 22.0 per cent are in the 12–14 age group, and nearly one fifth (19.4 per cent) are in the 15–17 age group (see table A.6). The child population is concentrated mostly in rural areas (table 2): more children live in rural (62.4 per cent) than urban areas (37.6 per cent). Furthermore, the largest percentage of the child population (29.5 per cent) lives in the North–West region of the country (see also table A.1).

2.2 Child activity status of children in the 5–14 age group

Before examining the child labour situation, it is useful to look at the overall activity status of children and, in particular, at the interaction between children's work and schooling. The child population can be divided into four mutually exclusive activity groups: children working only, children attending school only, children combining school and work, and children in neither activity. Table 3 shows that 77.6 per cent of children in the 5–14 age group attend school: this figure includes children attending school only (42.3 per cent) and

children working and in school (35.3 per cent). A total of 46.5 per cent (23,184,430) of children in the 5–14 age group are working: about one in ten children are exclusively working, while almost four in ten are combining work and school. A total of 11.2 per cent of children are neither at work nor in school, so not in either activity.

Significant differences exist by area of residence. Children in rural areas are more likely than children in urban areas to be working exclusively or to be not working or attending school, and they are less likely to be in school only (see table A.2). A total of 15.5 per cent of children in the 5–14 age group in rural areas are exclusively

working compared to only 3.8 per cent in urban areas. In urban areas, children are more likely to be attending school: nine out of ten children in urban areas are attending school (whereas in rural areas, fewer than seven out of ten children attend school). Furthermore, in urban areas, 57.6 per cent of children in the 5–14 age group attend school unencumbered by work responsibilities (whereas only 33.2 per cent in rural areas attend school exclusively).

Regional disaggregation shows a higher rate of out-of-school children in the northern region than in the south. The proportion of 5- to 14-year olds not in school in the North–East region is 47.5 per

► Table 3. Child activity status of children in the 5–14 age group (% of child activity, by sex, residence and region)

	South-West	1.4	63.3	33.0	2.3	34.4	96.3	3.7
Total 5-14		11.2	42.3	35.3	11.2	46.5	77.6	22.4

Source: Calculations are based on the Nigeria Child Labour and Forced Labour Survey 2022.

cent, in the North–West 37.4 per cent and in the North–Central region 18.2 per cent. This indicator is lowest in the South–East region (2.8 per cent) followed by 3.7 per cent in the South–West and 5.4 per cent in the South–South region (see also table A.3).

Children’s involvement in work and school by gender is similar, although female children are slightly more likely to be in school than their male counterparts (78.1 per cent for girls versus 77.2 per cent for boys).

2.3 Child activity status of children in the 15–17 age group

Table 4 and table A.4 disaggregate children in the 15–17 age group by activity status. Of 15- to 17-year-olds, 45.3 per cent (5,202,409) are

engaged in work and school activities simultaneously. A total of 8.1 per cent (925,733) are neither working nor in school, and 21.9 per cent (2,517,448) are working exclusively.

A look at gender differences shows that 47.1 per cent of males and 43.4 per cent of females are simultaneously working and in school. While girls in the 5–14 age group are slightly more likely to attend school, gender differences in education increase with age; in the 15–17 age group, 67.8 per cent of girls attend school compared to 72.1 per cent of boys, although boys are also slightly more likely to be working than girls.

The survey results by area of residence indicate little difference between the urban and rural areas in terms of the percentage of 15- to 17-year-olds who are both working and attending school. A comparison of the percentage of children

attending school in the 5–14 and 15–17 age groups reveals that school attendance reduces with age, particularly in urban areas. Children in the 15–17 age group are more likely to be in school in urban than in rural areas (80.1 per cent in urban areas versus 63.4 per cent in rural areas).

Disaggregating by states, table A.5 reveals that Abia has the largest percentage of 15- to 17-year-olds who are working (93.0 per cent), followed closely by Cross River (92.3 per cent). Additionally, Kebbi and Katsina stand out as the states with the highest rates of children in the 15–17 age group who are out of school, with 65.7 per cent and 65.6 per cent, respectively.

► Child labour definitions and measurement

The term “child labour” as defined by the ILO is work that deprives children (a person under the age of 18) of their childhood, their potential and dignity, and that is harmful to their physical and mental development. The United Nations Convention on the Rights of the Child (1989) is a legally binding international agreement setting out the civil, political, economic, social and cultural rights of every child, regardless of their race, religion or abilities. The United Nations (UN) Convention as well as the ILO Minimum Age Convention, 1973 (No. 138), and Worst Forms of Child Labour Convention, 1999 (No. 182), set clear boundaries for child labour and provide the legal grounds for international, regional and national actions against it. These international conventions provide the basis for member states to pursue national policies designed to ensure the effective abolition of child labour and to adopt a minimum age for employment at a level consistent with the physical and mental development of young persons.

In accordance with the global conventions, the African Charter on the Rights and Welfare of the child (AHG/ST.4 REV.I), the African Union Ten Year Action Plan to Eradicate Child Labour, Forced Labour, Human Trafficking and Modern Slavery, the Economic Community of West African States (ECOWAS) Child Policy, the ECOWAS Regional Action Plan for the Elimination of Child Labour and Forced Labour in West Africa (2021) as well

as the Strategic Framework for Strengthening National Child Protection Systems to Prevent and Respond to Violence, Abuse and Exploitation against Children in West Africa and its implementation guidelines clearly set out the actions required to achieve Sustainable Development Goal (SDG) target 8.7 in the region.

In response to the guidelines prescribed in international legal standards relating to the rights of children, the Federal Government of Nigeria has ratified several UN and ILO Conventions, including the UN Convention on the Rights of the Child (1989) and ILO Conventions Nos 138 and 182. The Government has also adopted the regional frameworks (table 5) and enacted a number of laws to protect children in Nigeria, including in the 1999 Constitution of the Federal Republic of Nigeria, as amended; the Child Rights Act (2003); the Labour Act (2004); the Criminal Code Act (2004); the Penal Code (1959); the Violence Against Persons (Prohibition) Act (2015); the Cybercrime (Prohibition, Prevention, etc.) Act (2015); and the Trafficking in Persons (Prohibition) Law Enforcement and Administration Act (2015), among others, which cover various aspects of protection for children, such as child labour, forced labour, child prostitution, child marriage/betrothal, child pornography, child trafficking and sex-related offenses.

► Table 5. National Legal frameworks and some relevant provisions.

RELEVANT SECTIONS	PROVISION
Law: 1999 Constitution of the Federal Republic of Nigeria	
Section 17. (3) (a-h) Exploitation of Children and young person	Government policies must ensure that - a. Citizens have equal opportunity to adequate means of livelihood, and suitable employment, b. Conditions at work are just and humane, with provision for leisure, social, religious, and cultural life, c. The health, safety, and welfare of people in employment are not endangered or abused, d. There are adequate medical and health facilities for all persons, e. There is equal pay for equal work without any discrimination, f. Children and young persons are protected from ALL forms of exploitation, and from moral and material neglect. g. Public assistance is provided in all deserving cases. h. The evolution and promotion of family life is encouraged.
Law: Criminal Code Act (2004)	
Section 223 Procuration	Procuring a girl under the age of 18 to have unlawful carnal connection with any other person(s), to become a common prostitute or to reside in a brothel in Nigeria or elsewhere is an offence punishable by two years' imprisonment.
Section 340. Endangering life or health of apprentices or servants	Endangering the life or health of apprentices or servants under the age of 16 is a felony (serious offence/crime) liable to imprisonment for three years.
Section 341 Abandoning or exposing children to harm	Unlawful abandonment or exposure of a child under the age of 7, in a manner that causes any grievous harm, is a felony (serious offence/crime) liable to imprisonment for five years without the option of a fine.
Law: Child Rights Act (2003)	
Section 28. Forced or exploitative labour of a child	(1) No child shall be- a. subjected to any form of forced or exploitative labour; b. employed to work in any capacity except where a family member engages him/her in light agricultural, horticultural or domestic work; c. required to lift, carry or move any heavy thing that can likely affect his/her physical, mental, spiritual, moral, or social development; d. employed as domestic help outside his/her own home or family environment. (2) No child shall be employed or work in an industrial undertaking, except work done in technical schools or similar institutions. (3) Any person who is found guilty of these offenses is liable to a fine or imprisonment for five years, or both. This applies to companies and their officials.
Law: Labour Act (2004)	
Section 49 Contracts of apprenticeship	Any child between the ages of 12 and 16 can sign a contract of apprenticeship with the consent of his/her parent or guardian and with the approval of a labour officer. The contract must be for the purpose of systematically acquiring a skill, or domestic training for not more than five years. Any person aged 16 or above may choose an apprenticeship by himself/herself for not more than five years.
Section 53. Offences	(1) It is an offence to remove an apprentice between the ages of 12 and 16 from Nigeria without the written approval of the Minister. Any person who is found guilty of this offence is liable to a fine or imprisonment for one year, or both.

RELEVANT SECTIONS	PROVISION
Section 59. Prohibited child work	<p>(1) No child shall-</p> <p>a. be employed or work in any capacity except where a family member engages him/her in light agricultural, horticultural or domestic work;</p> <p>b. be required to engage in work that may be harmful or injurious.</p> <p>(2) Children under the age of 15 should not be employed in industrial work, except for work done in technical schools or similar institutions.</p> <p>(3) Children under the age of 14, except for those in domestic service, may be employed only on a daily wage, on a day-to-day basis, as long as he/she returns to his parent's or guardian's house each night.</p> <p>(4) Any child under the age of 16 who is employed must be able to return to his/her place of residence daily, except with the approval of a labour officer or by a written contract.</p> <p>(5) Children under the age of 16 should not be employed to work underground, on machines or on public holidays.</p> <p>(6) A young person shall not be engaged in employment injurious to his/her health, or dangerous or immoral.</p> <p>(7) An employer of a young person under the age of 16 must discontinue the employment upon either oral or written notice that such engagement is against the wishes of the parent or guardian of that child.</p> <p>(8) A child under the age of 16 in employment shall not be required to work for more than four consecutive hours or for more than eight hours in one day.</p>
Section 60. Night work	A child shall not be employed to do night work, unless he/she is over the age of 16 and the work by reason of its nature is required to be carried out day and night, or in cases of emergency.
Section 61. Child labour in shipping	Young persons under the age of 15 shall not be employed in a ship, except for the purpose of schooling or training and under the supervision of a public officer or family member(s), and with a certificate signed by a medical practitioner.
Section 62. Register of young persons	A register of young persons in an industrial undertaking must be kept by his/her employer with detailed information about the young persons in that organization, which must be produced for inspection by labour officers.
Section 65. Minister's regulations	The Minister in charge of labour affairs may make any regulations concerning the employment of women and young persons as domestic servants.
Law: Trafficking in Persons (Prohibition) Law Enforcement and Administration Act (2015)	
Section 13. Child trafficking can be established whether the "means"(a) of trafficking is present or not	The act of recruiting, transporting, transferring, receiving or harbouring a person who is under the age of 18 for the purpose of exploitation shows that trafficking has taken place and attracts a fine and two years' imprisonment.
Consent of a child victim of trafficking is not a defence	The victim's "consent" is not a defence to trafficking in persons. It does not matter whether a victim is in agreement or approved of the act, as long as force, fraud, deception and other means of trafficking were used. And if the victim is a child, consent is absolutely immaterial. No one can truly give his/her consent to be exploited.
Section 15. Procurement for prostitution, cross-border sexual exploitation and bestiality	Any person who moves children [persons under the age of 18] from one place to another for illicit intercourse, or keeps, detains or harbours a person for prostitution or other sexual exploitation with people or animals is liable on conviction to imprisonment for five years and a fine of 500,000 naira.
Section 16. Recruiting children for sexual exploitation	Any person who recruits children [persons under the age of 18] for prostitution or sexual exploitation anywhere is liable on conviction to imprisonment for not less than seven years and a fine of at least 1 million naira.

Note: (a) The "means" of trafficking: the "means" used by traffickers include threats, force, abduction, fraud, deception, giving and receiving bribes or other benefits to obtain the consent of a person having control over another person, or through the abuse of a position of power or position of vulnerability.
Source: ILO compilation.

The National Policy on Child Labour and its National Action Plan (NAP) for the Elimination of Child Labour 2021–25 is the national response to combating child labour in Nigeria and is aligned with the African Union and ECOWAS Regional Action Plans. It reflects the Government's determination and political will to take decisive action against child labour by providing the legal framework and the enabling environment for the elimination of child labour and its worst forms.

The National Policy on Child Labour defines child labour as work that harms children's well-being and hinders their education, development and future livelihoods. The policy is complementary to all existing policies, laws and regulations on matters relating to children, especially at work. The legal framework for this policy document is in consonance with relevant national policies, national laws and international conventions. In addition, the goal of the NAP for the Elimination of Child Labour is to provide a road map for accelerating action towards achieving the elimination of the worst forms of child labour by 2025 and child labour in its entirety by 2030.

Based on national legislation and national statistical practices, and with reference to international legal and statistical standards concerning child labour, children in child labour in this report consist of the following groups:

- ▶ Children in the 5–14 age group engaged in the production of goods for their own final use (own-use production work); work performed for others in exchange for pay or profit (employment work); or unpaid trainee work.
- ▶ Children in the 12–14 age group engaged in the production of goods for their own final use; work performed for others in exchange for pay or profit; or unpaid trainee work, except those in permissible light work. Light work includes economic activities performed for less than 14 hours per week in non-hazardous conditions.
- ▶ Children in the 15–17 age group who work in industries and occupations designated as hazardous, or who work for long hours (43 hours or more per week), or at night in industries and occupations not designated as hazardous.

▶ 4

► Child labour prevalence

Of all children 5 to 17 years old in Nigeria, 50.5 per cent (31,756,302) are engaged in economic activity with little variation between boy and girls (see table A.8). However, not all children involved in economic activity are in child labour. As shown in table 6 and Figure 2, 39.2 per cent (24,673,485) of children are in child labour and more than 14 million are involved in hazardous work (22.9 per cent of children 5 to 17 years old). Among those in child labour, more than 20.1 million are young children in the 5–14 age group and over 4.5 million are older children in the 15–17 age group (table 6). This finding is crucial as it demonstrates that a main driver of child labour in Nigeria

is children starting to work too early. Children's involvement in child labour is similar by sex, with male children (39.6 per cent) slightly more likely to be involved in child labour than female children (38.8 per cent).

As seen in Figure 1, the incidence of child labour is higher in rural areas at any age; 44.8 per cent of children 5 to 17 years old are in child labour in rural areas (17,523,426 children), whereas child labour in urban areas stands at 30.0 per cent (7,081,651 children).

Hazardous work is also more frequent in rural areas (see table A.9): more than 10.5 million

► Figure 1. Child labour prevalence (% of children 5 to 17 years old in child labour, by sex, residence and region)

Source: Calculations are based on the Nigeria Child Labour and Forced Labour Survey 2022.

children 5 to 17 years old in rural areas are in hazardous work (26.8 per cent of children), whereas in urban areas almost 4 million children are in hazardous work (16.3 per cent). A focus on hazardous work by age makes clear that older children are more likely to be engaged in such work, as 37.3 per cent of children in the 15–17 age group are involved in hazardous work compared to 29.0 per cent of children in the 12–14 age group and 15.8 per cent in the 5–11 age group (see table A.9).

An analysis across regions (table 6 and table A.9) shows that the North–West geopolitical zone has the highest number of children in child labour

(6,407,102) and in hazardous work (3,266,728). However, in terms of the percentage of children in child labour and hazardous work, the South–East region has the highest prevalence of children involved in child labour and hazardous work, 49.9 per cent and 32.2 per cent, respectively.

Across Nigeria's states, Cross River state recorded the highest percentage of children in child labour with 67.4 per cent, followed by Yobe state with 62.6 per cent (see table A.10). The lowest prevalence was recorded in Lagos state with 8.9 per cent among children 5 to 17 years old.

► Table 6. Children in child labour (% and number, by age group, sex, residence and region)

► Household and community factors correlated with child labour

This chapter looks at certain household and community factors that are correlated with child labour. Correlating child labour prevalence with the characteristics of children's households and the communities where they live can be useful to gain initial insight into the factors driving child labour and thus into possible targets for policy responses. Correlation is not causation, however,

and caution should be exercised in drawing policy conclusions on the basis of correlations alone.

Table 7 presents some of the household and community factors collected in the NCFLS and outlines research and theory about their relevance to child labour.

► Table 7. Key household and community factors and their relevance to child labour

Household and community background factors	Relevance to child labour
<i>Education level of household head</i>	Child labour in many contexts is strongly negatively correlated with the education level of the household head. A possible explanation is that better educated parents have greater knowledge of the benefits of education and/or are in a better position to help their children exploit the earning potential acquired through education.
<i>Household composition</i>	Children from households with more children are typically more likely to be in child labour, presumably because larger households have more dependent members to support. The presence of more prime-age adults in the household has the opposite effect, reducing the likelihood of children's employment. The effect of elderly household members can vary – old age pensions can help to ease household resource constraints and dependency on child labour, but the opposite can occur in cases in which old age pensions are not available.
<i>Household income poverty</i>	Child labour is typically much more common among children from low-income and/or poor households. This result points to the fact that socio-economically vulnerable households are more likely to have to resort to child labour to meet their basic needs. The poverty–child labour link is also mutually reinforcing. Children whose education is denied or impeded by child labour enter adulthood lacking the skills needed for decent work, leaving them more at risk of poverty as a result.
<i>Employment status of household head</i>	The employment status of the household head can be another important indicator of socio-economic vulnerability. Heads of households who are unemployed or who are outside the labour market altogether are more likely to be in situations of socio-economic vulnerability and, concomitantly, to have to resort to their children's labour as a result.
<i>Contractual status of employed household head</i>	The contractual status of employed household heads likewise is linked to household socio-economic vulnerability. The lack of a written contract is often suggestive of precarious work in the informal economy, while written contracts are more likely to be associated with more stable jobs in the formal economy.
<i>Household indebtedness</i>	Households can be forced to turn to child labour to pay their debts; in extreme circumstances, household debt can be associated with debt bondage involving children.
<i>Exposure to shocks</i>	Households experiencing individual shocks (for example, catastrophic illness or injury, job loss) or collective shocks (for example, natural disasters, food-price spikes, economic shocks) are more likely to resort to child labour as a means of buffering the shock's adverse impact. This is especially the case in households already in situations of socio-economic vulnerability, which are pushed below the subsistence floor as a result of a shock.

Household and community background factors	Relevance to child labour
<i>Proximity to primary and secondary schools</i>	A shorter distance to school reduces the direct and indirect cost of travel to attend school, making schooling more attractive as an alternative to child labour. Parents may be especially reluctant to allow their daughters to travel long distances to school, for cultural reasons as well as cost considerations, and thus school proximity can be a particularly important determinant of girls' schooling and work. Research also suggests that the presence of a secondary school in a community can play a role in parents' decisions about children's schooling and work earlier in the education cycle; parents may be less willing to invest in their children's primary schooling when there is no opportunity for their children to proceed to secondary schooling, where the returns on their investment in their children's education in the form of better job prospects begin to be realized.
<i>Access to basic services</i>	Access to basic services can be an important determinant of child labour, in large part because it influences the value of children's time outside the classroom. In contexts where access to basic services, such as water, electricity and gas networks, is limited, children may have to shoulder a greater burden of tasks such as carrying water and fetching fuelwood.

Source: ILO compilation.

An examination of the survey results on child labour by household wealth reveals that children from households in the lowest wealth quintile are more likely to be exposed to child labour (45.0 per cent) than children from households in the highest wealth quintile (25.7 per cent), as shown in Figure 3a, with no substantial differences between males and females (see table A.11). Of note is that households in the bottom three wealth quintiles have a similar prevalence of child labour (45.0 per cent for the lowest quintile, 43.8 for the second and 45.5 per cent for the third) and it is not until the fourth and fifth wealth quintiles that the figures start to improve, to a 39.3 per cent incidence of child labour in the fourth quintile and 25.7 per cent in the highest quintile.

Another characteristic that can influence child labour outcomes is the sex of the household head (Figure 3b). Children from female headed households are more likely to be involved in child labour

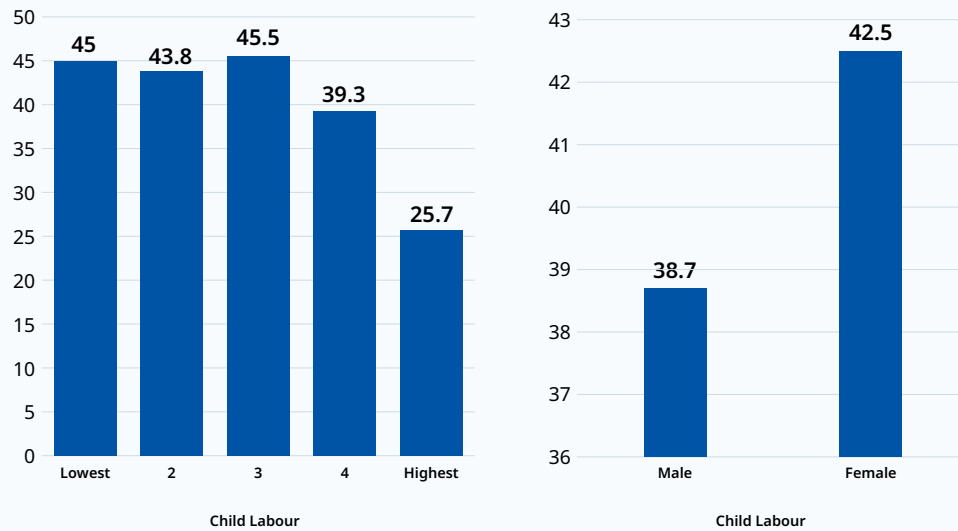

(42.5 per cent) than from male headed households (38.7 per cent). This phenomenon could be due to certain factors correlated with the sex of the household head, such as their education level and employment status.

Figure 4 shows the negative relationship between involvement in child labour and the education level of the household head. While 28.4 per cent of children 5 to 17 years old whose household head attained tertiary education are in child labour, 43.2 per cent of children whose household heads received a primary education or none at all are involved in child labour. Notably, boys with the highest rate of child labour are those who live in households in which the head has a lower-secondary education, whereas the highest rate of child labour for girls occurs in households in which the head has only primary education or no education (see table A.11).

▶ 6

► Characteristics of child labour

This chapter delineates child labour in more detail by looking at children's involvement in child labour by forms of work. A focus is also placed on employed children's branch of economic activity and status in employment.

6.1 Child labour and forms of work

Disaggregating the economic activity in which children in child labour are involved by form of work can help better understand child labour. In line with the latest international measurement standards,¹⁰ forms of work include own-use production of goods,¹¹ employment work¹² and unpaid trainee work.¹³ Each child in child labour is involved in at least one of these three forms of work if not more than one. It should be noted that collecting firewood and fetching water are both activities included as own-use production.

Table 8 indicates that in Nigeria, of children 5 to 17 years old in child labour, 93.8 per cent are working in own-use production, 24.2 per cent are in employment and 11.3 per cent are in unpaid trainee work. Own-use production work is the most prevalent form of work across the age groups and other background variables. Younger children in child labour (in the 5–14 age group) are more likely than their older counterparts to be involved in own-use production of goods (95.3 per cent versus 87.0 per cent). However, children in child labour in the 15–17 age group are more likely to be found in employment (43.5 per cent) or unpaid trainee work (20.0 per cent) than children in the 5–14 age group (19.9 per cent in employment and 9.3 per cent in unpaid trainee work).

Looking at both sexes, female children in child labour are more likely than males to be engaged in own-use production work (94.7 per cent versus 92.9 per cent), whereas male children in child labour are more likely to be found in employment (27.1 per cent of boys compared to 21.2 per cent of girls) and in unpaid trainee work (12.0 per cent of boys compared to 10.5 per cent of girls). As mentioned, own-use production work is most common regardless of the area of residence, but it is more common in rural areas where 95.7 per cent of children in child labour are involved in this form of work versus 89.0 per cent in urban areas. Children involved in child labour in rural areas are also more likely to be in employment work than children in child labour in urban areas (25.9 per cent versus 20.1 per cent). In urban areas, children in child labour are more likely to be involved in unpaid trainee work than their rural counterparts (17.8 per cent versus 8.6 per cent, respectively).

6.2 Child labour in employment

Of children involved in the form of work of employment (24.2 per cent of children in child labour), it is possible to further break down employment into categories based on the branch of economic activity (agriculture, industry and services) or the status in employment (contributing family worker, employee, own-account worker or other). This section looks at the characteristics of child labour for children who are in employment based on these two subcategories.

10 ILO, *Am the 18th ICLS Resolution concerning statistics of child labour in line with the 19th ICLS Resolution concerning statistics of work, employment and labour underutilization*, ICLS/20/2018/Room document 13 (2018).

11 ILO, *Amending the 18th ICLS Resolution*, p. 12. Persons in own-use production of goods are all persons of working age who, during a short reference period, performed any activity to produce goods for their own final use for a cumulative total of at least one hour. "For own final use" is interpreted as production where the intended destination of the output is *mainly* for own final use (in the form of capital formation, or final consumption by household members, or by family members living in other households).

12 ILO, *Amending the 18th ICLS Resolution*, p. 6. Persons in employment are defined as all those above a specified age who, during a short reference period, were engaged in any activity to produce goods or provide services for pay or profit.

13 ILO, *Amending the 18th ICLS Resolution*, p. 9. Persons in unpaid trainee work are defined as all those of working age who, during a short reference period, performed any unpaid activity to produce goods or provide services for others, in order to acquire workplace experience or skills in a trade or profession.

► **Table 8. Child labour and status at work (% distribution of children in child labour, by status at work, age, sex and residence)**

Children's background variables			Form of work(a)		
			Own-use production	Employment	Unpaid trainee
5-14 age group	Sex	Male	94.8	22.0	9.7
		Female	95.8	17.7	8.9
	Residence	Urban	91.9	15.4	13.2
		Rural	96.6	21.6	7.8
	Total		95.3	19.9	9.3
15-17 age group	Sex	Male	84.2	49.7	21.9
		Female	89.9	36.7	18.0
	Residence	Urban	78.4	37.4	35.0
		Rural	91.2	46.5	12.6
	Total		87.0	43.5	20.0
Total 5-17 age group	Sex	Male	92.9	27.1	12.0
		Female	94.7	21.2	10.5
	Residence	Urban	89.0	20.1	17.8
		Rural	95.7	25.9	8.6
	Total		93.8	24.2	11.3

Note: (a) Work in economic activities can be disaggregated into distinct forms of work; the forms of work that can be quantified based on the survey data include own-use production of goods, employment, and unpaid trainee work. More information is available in ILO, Amending the 18th ICLS Resolution concerning statistics of child labour in line with the 19th ICLS Resolution concerning statistics of work, employment and labour underutilization, ICLS/20/2018/Room document 13 (2018).

Source: Calculations are based on the Nigeria Child Labour and Forced Labour Survey 2022.

6.2.1 Branch of economic activity

Employed children in child labour can be classified by branch of economic activity. Following the International Standard Industrial Classification (ISIC, Rev 4), which is used to classify economic activity in most national statistical systems, the results show that the most common branch of economic activity for employed children 5 to 17 years old involved in child labour is the agriculture sector (56.8 per cent of children), followed by the service sector (25.8 per cent) and industry (17.4 per cent) (see table A.12).

Children's involvement in agriculture is particularly high for employed young children in the 5-14 age group in child labour, at 61.4 per cent compared to 48.4 per cent of children in the 15-17 age group. Involvement in the service and

industry sectors increases with age: 27.7 per cent of employed children in the 15-17 age group in child labour work in the service sector and 23.9 in industry.

Figure 5 shows that, while most male and female employed children in child labour are concentrated in agriculture, girls (34.1 per cent) are more likely than boys (19.8 per cent) to be found in the service sector. More boys work in the agriculture sector than girls (62.0 per cent versus 49.6 per cent). Engagement in industry is similar by gender (16.3 per cent of girls and 18.2 per cent of boys).

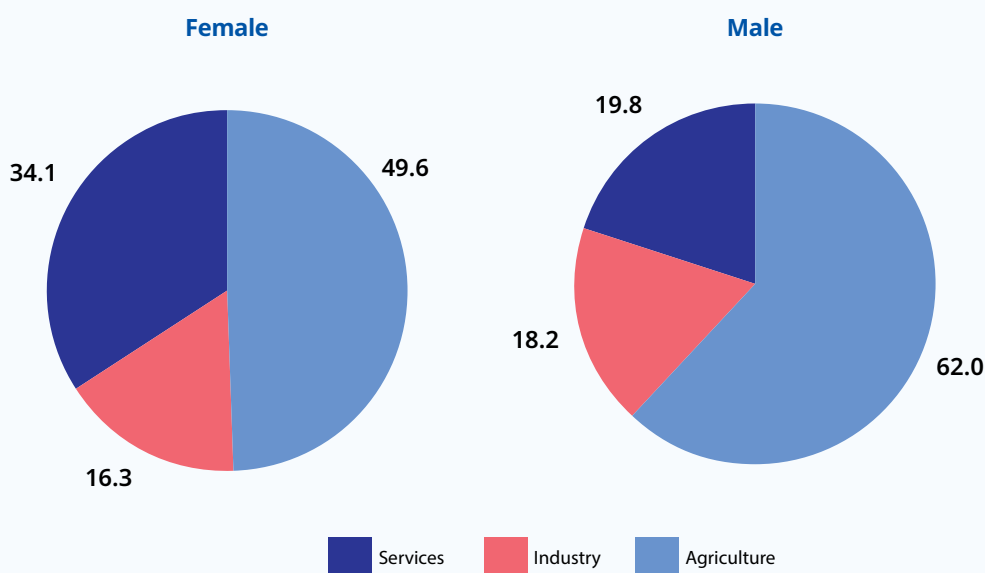

6.2.2 Status in employment

Employed children in child labour can also be classified by status in employment. The distinct categories are contributing family worker,

► Figure 5. Child labour and branch of economic activity (% of children 5 to 17 years old in child labour and employment, by branch of economic activity and sex)

(a) Female children

(b) Male children

Source: Calculations are based on the Nigeria Child Labour and Forced Labour Survey 2022.

own-account worker, employee or other, where other comprises apprentices/interns and children helping family members in their job. Contributing family work is work to assist any member of the household in any business or farming activity that generates income. Children in own-account work are self-employed, that is they have personal business or farming activities that generate income, while employees are children in child labour who work for pay for someone who is not a member of the household.

Considering the status in employment of children in child labour 5 to 17 years old, almost half are contributing family workers (41.5 per cent) and more than a fourth are in child labour as employees (25.8 per cent); children in own-account work represents the lowest share of those in child

labour and employment at 14.3 per cent (see table A.13).

While children involved in contributing family work represent the majority of children in child labour and employment at any age, young employed children in child labour (in the 5–14 age group) are more likely to be contributing family workers (46.5 per cent) than their older peers in the 15–17 age group (32.5 per cent). Employed 15- to 17-year-olds are more likely to be in child labour as employees (30.8 per cent) and own-account workers (17.3 per cent) than the younger 5- to 14-year-olds (23.0 per cent and 12.6 per cent, respectively).

In addition, as presented in Figure 6, female children 5 to 17 years old work more as a contributing family worker (46.5 per cent) than their

male counterpart (37.8 per cent). Employed male children in child labour are more likely to be an employee than their female peers (27.2 per cent versus 24.0 per cent). The percentage difference between male and female children involved in own-account work is small (15.1 per cent for girls and 13.7 per cent for boys). A greater proportion of female children in the 5–14 age group (52.1 per cent) work as a contributing family worker than

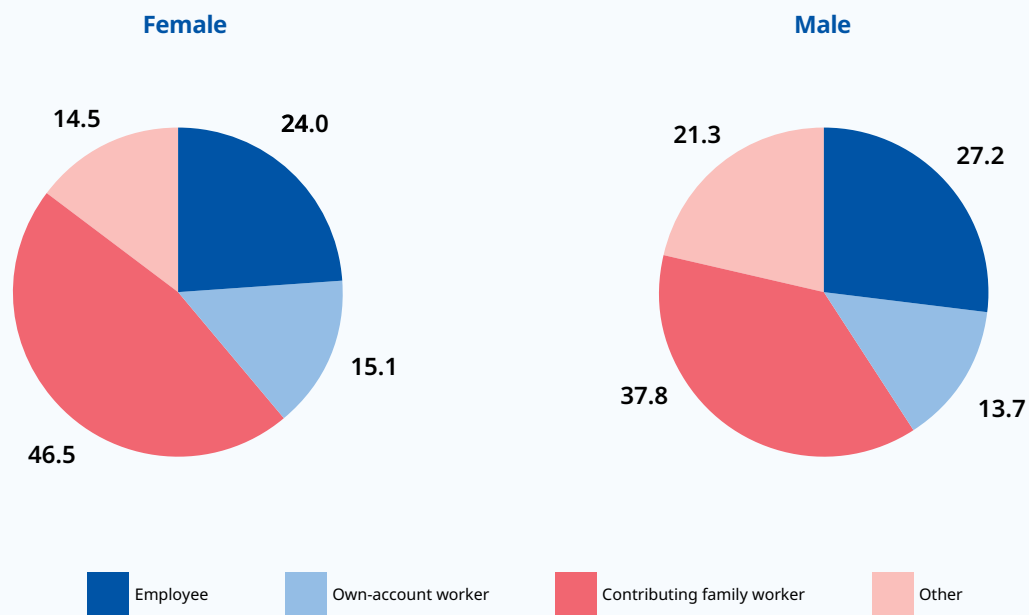

male children (42.3 per cent) (see table A.13). Male work status as an employee is also notable at 25.1 per cent in the 5–14 age group compared to 20.2 per cent for females.

Focusing on area of residence, children in child labour and employment work more as a contributing family worker in rural areas (44.7 per cent) than in urban areas (33.0 per cent) (see table A.13).

▶ 7

► Time intensity of child labour

This chapter reports on the amount of time children spend in child labour, specifically on the average weekly hours spent engaged in economic activities.

On average, children in child labour spend 14.6 hours per week at work (Figure 7). The time intensity of work increases progressively with age, from 9.8 weekly hours in the 5–11 age group in child labour, and 19.4 average weekly hours in the 12–14 age group, to 24.6 weekly hours in the 15–17 age group. A look at the working hours of children in child labour by sex shows that boys work on average 2.4 hours more than girls (15.8 hours per week versus 13.4 hours per week).

An examination of working hours by area of residence (table 9) reveals that children in child labour who live in rural areas work on average 2.3 more hours per week than those in urban areas (15.3 hours versus 13.0 hours). The difference is starker among younger children in the 5–11 age group where children in child labour in urban areas work on average 7.0 hours per week, while in rural areas these children work on average 11.0 hours per week. Regarding children in the 15–17 age group in child labour, however, those who live in urban areas work more hours on average than those in rural areas. A focus on the different states shows large variation in the average number of working

► **Figure 7. Time intensity of child labour (average weekly working hours of children 5 to 17 years old in child labour, by age group and sex)**

► **Table 9. Time intensity of child labour (average weekly working hours of children 5 to 17 years old in child labour, by age group, sex and residence)**

Individual background variables		Working hours by age group			
		5-11 years old	12-14 years old	15-17 years old	Total 5-17 years old
Sex	Male	10.8	20.5	26.3	15.8
	Female	8.9	18.4	22.9	13.4
Residence	Urban	7.0	16.3	25.8	13.0
	Rural	11.0	20.7	24.0	15.3
Sex and residence	Male, urban	7.4	15.9	29.9	14.3
	Male, rural	12.0	22.1	24.5	16.4
	Female, urban	6.5	16.6	21.5	11.7
	Female, rural	9.9	19.2	23.6	14.2
Total		9.8	19.4	24.6	14.6

Source: Calculations are based on the Nigeria Child Labour and Forced Labour Survey 2022.

hours of children in child labour (see table A.15). Lagos and Nasarawa are the states with the longest average working hours of children 5 to 17 years old in child labour, averaging 25.6 and 24.3 hours per week, respectively.

It is also possible to look at the differences in average weekly hours worked by children in child labour by the form of work in which they are involved (table 10). Children in child labour who are in the form of work qualified as employment work the most hours, with an average of 16.3 hours per week. Of note is that older children in the employment form of work, those in the 15-17 age group, work a much higher average number of hours (22.2 hours per week) than children in the 5-14 age group (an average of 13.4 hours per week). Children in child labour involved in unpaid trainee work spend on average 13.9 hours per week in that work, while children in child labour

involved in own-use production spend on average 8.9 hours in that activity per week.

For children in child labour involved in the form of work qualified as employment, important differences in the time they spend working by branch of economic activity and status in employment can be observed (see table A.14). While employed children in child labour in industry spend an average of 23.2 hours per week working in employment, in the service sector they work 22.5 hours and in the agriculture sector 18.9 hours. Differences are also apparent in the average number of hours these children spend working per week by status in employment. While employed children in child labour who are employees and own-account workers spend an average of 23.4 and 25.6 hours in employment per week, respectively, children in the other category and those employed as contributing family workers spend an average of 18.5 and 18.0 hours weekly, respectively.

► Table 10: Time intensity of child labour by form of work (average weekly working hours of children 5 to 17 years old in each form of work, by sex, age group and residence)

Form of work	Sex		Age group		Residence		Total
	Male	Female	5-14 years old	15-17 years old	Urban	Rural	
Employment	16.7	15.9	13.4	22.2	19.1	15.5	16.3
Own-use production	9.4	8.3	8.1	12.7	6.3	9.8	8.9
Unpaid trainee work	15.0	12.6	10.3	20.7	17.1	11.0	13.9

▶ 8

► Child labour and schooling

Child labour affects both the ability to attend school and the prospects of benefiting from schooling; children who spend many hours in child labour may not be able to attend school or take full advantage of the time they are in class. This chapter presents the survey findings in relation to how child labour impacts schooling.

8.1 Child labour and school attendance

The relationship between child labour and children's education cannot be over emphasized. The survey results show a significant difference in the school attendance rate of children in child labour and those not in child labour (Figure 8). A total of 81.4 per cent of children 6 to 14 years old not engaged in child labour attend school, while school

attendance falls to 75.1 per cent for children in that age group in child labour (see table A.16).

This situation is common for both male and female children in the country. A total of 81.5 per cent of girls 6 to 14 years old not in child labour attend school, while 76.0 per cent of those in child labour attend school. For male children, the gap is slightly larger, where 81.2 per cent of boys out of child labour attend school, while only 74.3 of those in child labour attend school.

The school attendance gap between children in child labour and those not in child labour is of a similar magnitude in urban and rural areas, but children in rural areas are much less likely to attend school in general (see table A.16). A total of 88.9 per cent of children 6 to 14 years old in child labour who live in urban areas attend school, whereas only 69.7 per cent for the same population living in rural areas attend school.

► Figure 8. Child labour and school attendance (% of children 6 to 14 years old attending school, by child labour status and age)

Source: Calculations are based on the Nigeria Child Labour and Forced Labour Survey 2022.

It is also possible to analyse school attendance based on the form of work in which children in child labour are involved (see table A.17). A total of 69.6 per cent of children 6 to 14 years old who are in employment attend school, whereas the totals for children in own-use production and unpaid trainee work rise to 75.1 per cent and 78.2 per cent, respectively. This is important to note as it indicates that employment as a form of work has the most detrimental effect on children's school attendance.

Children in child labour who are in the form of work qualified as employment have the lowest school attendance of children in all other forms of work. An analysis of the school attendance of children in employment by branch of economic activity is informative; it shows that children 6 to 14 years old in child labour with employment in agriculture have the lowest school attendance as 60.7 per cent of these children go to school, while 74.8 per cent of the children employed in services and 76.3 per cent of those in industry attend school (see table A.18).

8.2 School attendance and child labour time intensity

The results further reveal that not only the state of being in child labour is related to school attendance, but the time spent engaged in child labour also influences school attendance. The findings clearly indicate that the number of hours children spend working affects their ability to attend school. While 80.3 per cent of children 6 to 14 years old in child labour who work 1 to 7 hours per week in economic activities attend school, the percentage of children attending school reduces to 75.1 per cent for children who spend between 8 and 14 hours a week in economic activities weekly, 72.0 per cent for children who work 15 to

21 hours, and 69.9 per cent for children who work 22 hours or more (see table A.19).

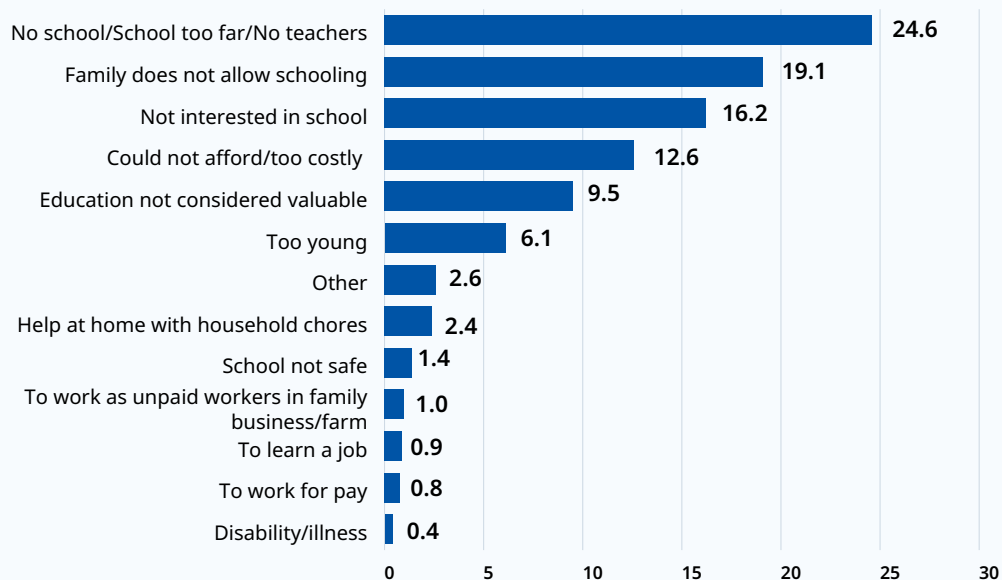

8.3 Main reasons for never or not currently attending school

The survey also provides information on the reasons children have never attended school or are not currently in school. Common reasons for never attending school among children 6 to 14 years old in child labour point to the lack of access to quality and affordable education, with 24.6 per cent of children reporting that there are no schools, the school is too far or there are no teachers, and 12.6 per cent of children indicating that school is too costly (Figure 9). Differences exist between female and male children; the most common reason for girls 6 to 14 years old in child labour to have never attended school is that the family does not allow it, the case for 22.3 per cent of families (see table A.20).

Children in child labour in rural areas are more likely to have never attended school than in urban areas due to a lack of schools in the community. A total of 26.5 per cent of children 6 to 14 years old in child labour in rural areas never attended school because of the lack of school in the community compared to only 7.1 per cent in urban areas. For children in urban areas in child labour, the most cited reason for never attending school is that schooling is too costly (28.2 per cent).

The reasons for children 6 to 14 years old not currently attending school although they attended in the past can be analysed. Of the children in child labour not currently attending school, 30.2 per cent report that they finished school, 15.3 per cent report they are not interested in school, 10.0 per cent report it is too costly or they cannot afford it, and 8.5 per cent report that no school exists, it is too far or there are no teachers (Figure 10 and table A.21).

► Child labour and health

This chapter looks at how child labour can jeopardize children's health and safety. The health and safety dimensions of children's work lie at the heart of international legal standards relating to child labour and can provide critical information concerning the industries, occupations and working conditions that should be included in national definitions of hazardous work and that should be prioritized in policy responses to child labour. The Nigeria Child Labour Survey undertaken in Nigeria provides information on the *exposure* to health and safety risks in the workplace and on child labour's *impacts* on health and safety.

9.1 Exposure to workplace health and safety risks

The involvement of children in child labour exposes them to hazards and risks of injury or illness that cause harm.

Children 5 to 17 years old who are in child labour are generally exposed to hazards and risks. As shown in Figure 11, the most common hazard or risk affecting 36.0 per cent of children in child labour relates to using sharp tools, such as axes, knives and machetes, followed by carrying heavy loads (relevant for 22.6 per cent of children; for boys 24.0 per cent and for girls 21.2 per cent), and working long hours in the hot sun, affecting 11.8 per cent of children (see also tables A.21 to A.25). Overall, 53.3 per cent of children in child labour are exposed to at least one workplace hazard, with male and female children almost equally exposed (53.3 per cent of boys and 53.2 per cent of girls) (see table A.22). However, children in child labour living in rural areas are more likely to be exposed to at least one workplace hazard (55.4 per cent) than those living in urban areas (48.1 per cent). Notably, 89.7 per cent of children in the 15–17 age group in child labour are exposed to at least one workplace hazard compared to 45.0 per cent of children in the 5–14 age group.

9.2 Work-related impacts on health and safety

Children 5 to 17 years old engaged in child labour can experience certain injuries and illnesses that jeopardize their health and safety. A total of 16.3 per cent of children in child labour have experienced at least one injury at work (see table A.27). As presented in Figure 12, the most frequent work-related injuries of children in child labour are bad bruises, deep cuts and injury from falling. As many as 6.1 per cent of children 5 to 17 years old in child labour (nearly 1.5 million children) were badly bruised on at least one occasion and 6.0 per cent (also about 1.5 million) had a deep cut.

Older children in child labour are more likely than their younger peers to harm themselves at work: 25.4 per cent of children in the 15–17 age group in child labour experienced at least one injury at work compared to 14.3 per cent of those in the 5–14 age group (see table A.27). Of children in the 15–17 age group, 10.8 per cent have suffered from a bad bruise and 10.9 per cent from a deep or long cut, whereas a smaller percentage of younger children have experienced these injuries (5.1 per cent and 4.9 per cent, respectively) (see tables A.27 and A.28).

Moreover, male children in child labour and children living in rural areas are more likely to experience at least one workplace injury or illness. A total of 18.0 per cent of boys in child labour have experienced at least one injury versus 14.6 per cent of girls (see table A.27). Likewise, 17.1 per cent of children in child labour who live in rural areas experienced at least one workplace injury compared to 14.4 per cent of children in child labour who live in urban areas.

Examining the incidence of injury among children in child labour by form of work discloses that children 5 to 17 years old in child labour who are engaged in employment are the most likely to experience at least one injury (31.3 per cent,

amounting to 1,874,393 children) (see tables A.29 and A.30). Unpaid trainee work follows closely behind, with 30.0 per cent of children 5 to 17 years old in child labour in this form of work

experiencing at least one injury. Notably, children in child labour engaged in own-use production are much less likely to experience an injury, totaling only 16.3 per cent of these children.

► Household chores

Household chores undertaken by children in their own homes, in reasonable conditions and under the supervision of those close to them, are an integral part of family life and children's development. In some cases, however, these household duties may become excessive or dangerous in a way that interferes with the children's education, health and general development. This chapter explores children's involvement in household chores in Nigeria.

Household chores are unpaid activities carried out within one's own household and include caring for household members; cleaning and making minor household repairs; cooking and serving meals; washing and ironing clothes; and transporting or accompanying family members to and from work and school (see table A.32). In more technical terms, household chores are referred to as own-use production of services. They constitute a "non-economic" form of production and are therefore excluded from consideration in the UN System of National Accounts, the internationally agreed standard guidelines for measuring national economic activity.

An important facet of understanding how children's involvement in household chores interacts with children's development is the time children spend doing household chores per week. Excessive time spent engaging in these chores may inhibit children from taking full advantage of education or engaging in other developmentally necessary activities.

Data limitations have made it impossible to calculate the average number of hours children spend doing household chores from this survey. Therefore, while this chapter presents initial statistics that help understand children's involvement in household chores in Nigeria, further investigation into how their involvement in these chores for extended periods of time is related to their development is needed. It is worth repeating, however, that involvement in household chores is not considered when calculating the

number or percentage of children in child labour, as household chores do not form part of the economic activities included in the UN System of National Accounts. Consequently, the data limitations do not affect the results of the child labour statistics presented in this report.

10.1 Involvement in household chores

As shown in table 11, 56.4 per cent of children 5 to 17 years old are involved in household chores in some capacity. However, it is important to note the large variations in children's involvement in household chores by age and sex. Overall, girls 5 to 17 years old are more likely to be involved in household chores: 62.2 per cent carry out household chores in contrast to 50.8 per cent of boys. Furthermore, this gender gap persists in all age categories.

Another notable characteristic is that children's involvement in household chores increases noticeably with age. While 46.2 per cent of children in the 5–11 age group participate in household chores, 69.3 per cent of children in the 12–14 age group are engaged in household chores and 72.6 per cent in the 15–17 age group conduct household chores. This demonstrates that as children grow older, they are more likely to participate in household chores.

Evidence from the survey results reveal that children in child labour are more likely also to be involved in household chores than children not in child labour. As many as 73.1 per cent of children in child labour are involved in household chores in contrast to 45.6 per cent not in child labour. This is an important finding as it demonstrates that children in child labour have other responsibilities in their household in addition to the activities they perform in child labour. This enhances the burden on these children even more and could further prejudice their development.

► **Table 11. Children's involvement in household chore (% of children 5 to 17 years old involved in household chores, by age group, sex, residence and involvement in child labour)**

Individual background variables		Age group			
		5–11 years old	12–14 years old	15–17 years old	Total 5–17 years old
Sex	Male	41.1	61.9	66.3	50.8
	Female	51.1	76.9	79.3	62.2
Residence	Urban	47.2	71.5	75.7	58.5
	Rural	45.6	67.9	70.5	55.1
Involvement in child labour	In child labour	66.5	81.7	85.2	73.1
	NOT in child labour	32.2	62.0	65.1	45.6
Total		46.2	69.3	72.6	56.4

Source: Calculations are based on the Nigeria Child Labour and Forced Labour Survey 2022.

10.2 Types of household chores

The survey results allow an investigation of children's involvement in household chores by specific task. Figure 13 shows that the most common household chore for children 5 to 17 years old is cleaning for the household (34.4 per cent), followed by washing clothes for the household (28.4 per cent). Not only are girls more likely to be involved in all household chores except repair work but the percentage difference between girls and boys involved in tasks like cleaning and cooking is significant.

10.3 Hazardous household chores

Children who perform household chores can sometimes engage in tasks that are dangerous and that put them at risk of physical harm. The

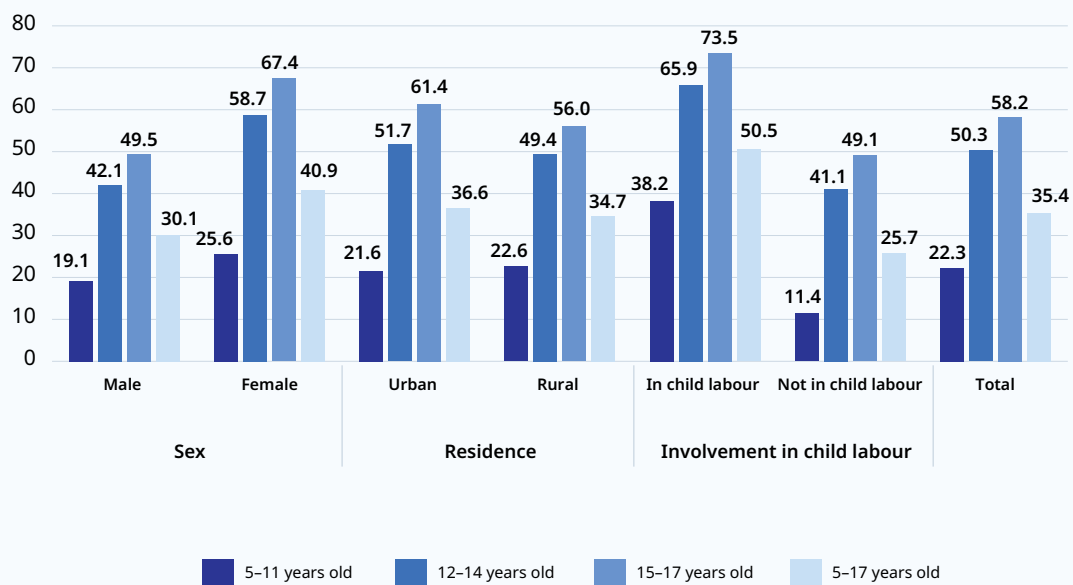

survey asked children if they had engaged in a variety of potentially dangerous tasks while conducting household chores (see table A.33). These tasks include using sharp knives while cooking, carrying or lifting an adult, using chemicals or bleach while cleaning and caring for a sick person (see table A.34). Figure 14 presents the percentage of children 5 to 17 years old who participated in at least one of these hazardous activities while doing household chores. Overall, 35.4 per cent of these children were involved in at least one hazardous activity when doing these chores. However, older children in the 15–17 age group were the most likely to perform a hazardous activity, with nearly 60 per cent engaged in at least one while doing chores. Furthermore, girls in all the categories were more likely to carry out a hazardous activity during household chores than boys: 40.9 per cent of girls 5 to 17 years old were involved in at least one hazardous activity versus 30.1 per cent of boys (also see table A.33).

▶ 11

► Priorities to eliminate child labour

This concluding chapter reports on the survey findings' implications for national efforts against child labour. It therefore goes beyond the descriptions of the survey results to explore how the findings should be addressed in policy terms.

11.1 Summary of findings

This section provides an overview of the main results from the report.

Overall, the survey findings reveal that 39.2 per cent of children 5 to 17 years old in Nigeria are involved in child labour – four out of every ten children. Child labour is persistent in all age groups, with 39.7 per cent of children in the 5–14 age group and 37.3 per cent in the 15–17 age group. Notably, the prevalence of child labour is higher in rural areas, where 44.8 per cent of children are engaged in this activity compared to 30.0 per cent in urban areas. This is a particularly important point as 62.4 per cent of children 5 to 17 years old in Nigeria live in rural areas. In addition, the results show that the South–East and North–East regions have the highest incidence of child labour: 49.9 per cent and 49.4 per cent of children in child labour, respectively. Understanding where child labour is most prevalent is a crucial consideration when planning interventions to mitigate it.

This report helps understand the community and household factors related to child labour. Overall, the findings indicate that child labour is more common in poorer households and in those in which the household head is less educated.

Further examination into the characteristics of child labour, specifically into the form of work in which children in child labour are involved, discloses that nearly 94 per cent of these children are engaged in own-use production of goods, while only 24.2 per cent are in the form of work of employment and 11.3 per cent are in unpaid trainee work. For the children in employment, the investigation into the branch of economic activity in which they are involved reveals that the majority (56.8 per cent) are concentrated in the agriculture sector, followed by 25.8 per cent in services and 17.4 per cent in industry.

A final and vital consideration explores the relationship between child labour and child development. This report investigates how child labour interacts with schooling and the health of children. Overall, children in child labour are less likely to be in school than those not in child labour. Of children 6 to 14 years old, 75.1 per cent of those in child labour attend school whereas 81.4 per cent not in child labour attend school. Furthermore, child labour puts children's health at risk. Of children 5 to 17 years old in child labour, 53.3 per cent have been exposed to at least one workplace hazard and 16.3 per cent have experienced a direct injury in the workplace.

All of these findings are vital to informing policy actions to eradicate child labour. They show not only where child labour is concentrated in Nigeria but also the ways in which child labour can put in jeopardy the mental and physical development of children.

11.2 Extant plans, policies and interventions

This section outlines the efforts and measures the Nigerian Government and NGOs have put in place to accelerate action on the elimination of child labour and its worst forms by 2025, in line with target 8.7 of the SDGs, and identifies policy priorities.

Government of Nigeria

Child labour is a global issue of concern to the Government of Nigeria as well as to employers, workers and other stakeholders and NGOs that have persistently sought solutions to reduce and subsequently eliminate it. To mitigate this scourge, through the Federal Ministry of Labour and Employment, the Government of Nigeria has created an enabling environment for the elimination of child labour, forced labour, human trafficking and modern slavery, by formulating various national laws and regulations as well as policies and by the ratification of ILO conventions that are key and instrumental to the elimination of child labour and forced labour.

Ratified ILO conventions

Convention No. 138 on the minimum age for work; Convention No. 182 on the worst forms of child labour; Forced Labour Convention, 1930 (No. 29); the Child Rights Act (2003), adopted in 34 states in Nigeria on the prohibition of children in illicit activities; the UN Convention on the Rights of the Child (1989); the Optional Protocol to the Convention on the Rights of the Child on the sale of children, child prostitution and child pornography (2000); the African Charter on Human and Peoples' Rights (1981) and Protocol on the rights of women in Africa; the Violence and Harassment Convention, 2019 (No. 190), including eliminating gender-based violence in the workplace.

National laws

Section 17 (3) (f) of the Constitution of the Federal Republic of Nigeria, 1999, as amended; section 59 (1) of the Labour Act; section 28 of the Child Rights Act on the prohibition of a child working in an industrial undertaking; sections 13, 22, 24 and 25 of the Trafficking in Persons (Prohibition) Law Enforcement and Administration Act; section 28 of the Child Rights Act on the prohibition of exploitative labour; section 30 of the Child Rights Act on the prohibition of child trafficking; section 32 of the Child Rights Act on forms of sexual abuse and exploitation of children; section 19 of the Trafficking in Persons (Prohibition) Law on the recruitment of persons for use in armed conflicts; sections 28 and 30 of the Child Rights Act on the prohibition of the involvement of children in illicit activities; section 28 of the Armed Forces Act and section 34 of the Child Rights Act on the minimum age for voluntary military recruitment.

The Federal Executive Council has approved that the minimum age for employment should be 15 years, as recommended by the National Steering Committee on the Elimination of Child Labour in 2012. Aligned with the international labour standard, the Labour Standard Bill provides for the minimum age of employment to be 15 years of age and for the enforcement of the List of Hazardous Child Labour in Nigeria.

Institutionally, to monitor the elimination of child labour in the country, the Government of Nigeria established a National Steering Committee on the Elimination of Child Labour. The Committee is made up of ministries, departments and agencies, faith-based organizations, employers' and workers' organizations (Nigeria Employers' Consultative Association, Nigeria Labour Congress, Trade Union Congress of Nigeria), civil society organizations/NGOs and international partners (ILO, United States Department of Labor, UNICEF and ECOWAS). Other Government actions include the constitution and inauguration of the State Steering Committee on the Elimination of Child Labour in the 36 states of Nigeria and Federal Capital Territory (FCT); the establishment and constitution of the Community Child Labour Monitoring Committee on child labour in collaboration with the ILO, through the ACCEL Africa project; the development of the National Reporting Template and training of relevant stakeholders on its application; and the annual commemoration on 12 June of World Day Against Child Labour, to create awareness of the ills of child labour and its elimination.

To promote child participation in the elimination of child labour, Nigeria conducted the National Children Conference on the elimination of child labour in 2021 and 2022, and the country became an Alliance 8.7 Pathfinder Country committing to achieving SDG target 8.7 (to take immediate and effective measures to eradicate forced labour, end modern slavery and human trafficking and secure the prohibition and elimination of the worst forms of child labour, including recruitment and use of child soldiers, and by 2025 end child labour in all its forms).

The second phase of the National Policy on Child Labour and the NAP for the Elimination of Child Labour was validated on 15 April 2021 for a five-year implementation period (2021-25). Seven states adapted the NAP to the context of child labour at the state level, creating road maps and strategies relating to the elimination of child labour and its worst forms. Enugu, Lagos, Niger,

Ogun, Ondo, Osun and Oyo have a State Action Plan (SAP) for the elimination of child labour.

Time-bound national plans, road maps and strategies relating to child labour and its worst forms

- ▶ NAP for the Elimination of Child Labour (2021 – 25)
- ▶ SAP for the Elimination of Child Labour
- ▶ National Social and Behavioural Change and Communication Strategy for the Elimination of Child Labour
- ▶ Road map for the Deployment of Alliance 8.7 in Nigeria and Communication Strategy
- ▶ List of Hazardous Child Labour

Key sectoral plans, policies and interventions in the fields of social protection, basic education, labour markets and rural livelihoods

Nigeria has set up schemes, policies and programmes concerning social protection, such as:

- ▶ National Priority Agenda for Orphans and Vulnerable Children 2019–26, driven by the Federal Ministry of Women Affairs
- ▶ Universal Basic Education Programme, driven by the Universal Basic Education Commission
- ▶ Early Childhood Educational Policy, driven by the Federal Ministry of Education
- ▶ National Policy on HIV, by the National Agency for the Control of AIDS
- ▶ National Social Investment Programmes
- ▶ Ending Violence Against Children, by the Federal Ministry of Women Affairs
- ▶ National Policy on the Elimination of Discrimination Against People Living with Disabilities, driven by the Federal Ministry of Humanitarian Affairs, Disaster Management and Social Development
- ▶ National Policy on Albinism in Nigeria, driven by the Federal Ministry of Education

- ▶ National Gender Policy, driven by the Federal Ministry of Women Affairs
- ▶ National Policy on Protection and Assistance to Trafficked Victims, driven by the National Agency for the Prohibition of Trafficking in Persons
- ▶ National Child Policy, driven by the Federal Ministry of Women Affairs
- ▶ National Policy on Migration, driven by the National Commission for Refugees, Migrants and Internally Displaced Persons
- ▶ Labour Act (2004)

Since 2015, the Government has introduced programmes concerning social protection that are aligned with these policies and schemes, such as:

- ▶ Nigeria's Conditional Cash Transfer (CCT) programme
- ▶ National Home-Grown School Feeding Programme

Key government efforts linked to the monitoring and enforcement of child labour laws

The NAP guides the implementation of the monitoring, evaluation and review strategy. Monitoring and evaluation (M&E) is conducted at the national, state and local government levels.

The M&E system at the national level is aligned with the ECOWAS regional action plan for the elimination of child labour and forced labour (2021 to 2030). As a pathfinder country, Nigeria produces an annual progress report on its achievement on SDG 8.7.

The national level consists of the National Steering Committee on the Elimination of Child Labour while the state level consists of the State Steering Committee on Child Labour and the local level consists of the Community Child Labour Monitoring Committee. These committees established M&E units, planning, research and statistics through the NAP and SAP, with the mandate to generate and analyse data for their respective organizations.

Guided by the NAP, the M&E mechanism for the elimination of child labour and forced labour comprises the following:

- ▶ the annual report of the National Steering Committee;
- ▶ biannual reports of state steering committees;
- ▶ quarterly reports of the local Government working groups;
- ▶ the National Reporting Template for the implementation of the NAP for the Elimination of Child Labour
- ▶ Federal Ministry of Labour inspection tools;
- ▶ a checklist for child labour specific inspections.

Non-governmental actors

Current NGO projects and activities targeting child labour and related issues

- ▶ ACCEL Africa project (2018–23)

This ILO regional project, aimed at eliminating child labour in supply chains in Africa, is funded by the Ministry of Foreign Affairs of the Netherlands with particular focus on those involved in the production of cocoa, coffee, cotton, gold and tea. It collaborated with supply chain actors who work in Africa on public policy, good governance, employment, representation, partnership and knowledge-sharing. In Nigeria, the project focused on cocoa in Ondo state and the artisanal and small-scale gold mining sector in Niger state, and was implemented by the ILO in collaboration with relevant ministries, departments and agencies, employers' and workers' organizations, faith-based organizations, civil society organizations/NGOs and ECOWAS at the regional level.

Community-level interventions

These interventions include:

- ▶ renovating schools in Ibala, Osun state, and Oke-Agunla, Ondo state;
- ▶ providing back-to-school kits for 1,400 beneficiaries;
- ▶ providing youths with vocational skills and startup equipment;

- ▶ providing adult caregivers/beneficiaries with equipment to start and improve their businesses through the ILO Start & Improve Your Business training module.

United States Department of Labor funded projects

- ▶ Action against Child Labour in Agriculture in West Africa

This project aims to support the ECOWAS Commission in implementing the Regional Action Plan for the elimination of child labour and also to support national governments in implementing National Action Plans to eliminate child labour. For the first time, through this project, the ILO will support communities to develop Community Action Plans (CAPs) in some identified pilot communities to implement the CAPs. The project will also strengthen the various national-, state- and community-level monitoring structures to ensure the effective elimination of child labour in the cocoa producing areas of Ondo state.

- ▶ Global Accelerator Lab Project

This US\$10 million project implemented by the ILO focuses on eliminating child labour through social protection systems and builds on already existing interventions by the ACCEL Africa project in Ondo state.

Child and Youth Protection Foundation (CYPF) WhatsApp platform

CYPF created a WhatsApp group called CYPF Crew with 246 members. The group aims to build the capacity of members on child protection and child labour and create awareness through publicity, referral mechanisms for child labour cases and case management. Members include civil society organizations, law enforcement officers, legal practitioners and child and youth protection advocates.

Action Against Trafficking in Persons and Smuggling of Migrants (A-TIPSOM)

This programme is a European Union External Action funded project under the 11th European Development Fund, implemented by the International and Ibero-American Foundation for Administration and Public Policies. Its main objective is to reduce trafficking in persons (TIP)

and the smuggling of migrants (SOM) at the national and regional levels, and between Nigeria and the European Union, with specific emphasis on women and children.

Its specific objective is to enhance the Government of Nigeria's ability to combat trafficking in persons and the smuggling of migrants. The expected outcomes are:

- ▶ improved governance of migration in Nigeria, with a specific focus on fighting TIP and SOM;
- ▶ greater prevention of TIP and SOM in key states of origin and transit;
- ▶ improved protection, return and reintegration of victims of trafficking and smuggling from Europe;
- ▶ enhanced identification, investigation and prosecution of traffickers and smugglers;
- ▶ more effective cooperation at the national, regional and international levels to fight TIP and SOM.

The project corresponds to the five-pronged approach (policy, prevention, protection, prosecution and partnership) adopted by the National Agency for the Prohibition of Trafficking in Persons.

Current programmes and activities of multilateral agencies targeting child labour and related issues

- Alliance 8.7 of the SDGs, a global partnership with three priority areas (migration, supply chains, and humanitarian settings and conflict) and a road map for taking immediate and effective measures to eradicate forced labour, end modern slavery and human trafficking, and secure the prohibition and elimination of the worst forms of child labour, including the recruitment and use of child soldiers, and by 2025 end child labour in all its forms.
- ▶ Projects that aimed to improve access to education include:
 - the National Social Safety Nets Project (2016– 22), a US\$50-million project to provide primary school lunches and offer conditional cash transfers based on children's enrolment – the project

worked to enrol participants in 33 states in the country and 17 focus states have been adopted;

- Better Education Service Delivery for All (2017–22), a \$611-million project to increase access to education for out-of-school youth and improve literacy – the project has helped reduce the number of out-of-school children by 924,590, of which 633,772 were girls;
- the Safe Schools Initiative, a donor funded programme implemented by the Government and international organizations that aims to improve access to education in north-eastern Nigeria.

Current efforts of employers' and workers' organizations against child labour

- ▶ Nigeria Employers' Consultative Association, in collaboration with the ACCEL Africa project
 - developed and validated a code of conduct for private recruitment agencies in collaboration with the ILO FAIRWAY Programme;
 - developed and validated a code of conduct for employers, which guides companies' practices towards the elimination of child labour (launched in June 2022);
 - developed guidance tools for business through adaptation of the ILO–International Organisation of Employers guides for business for use by Nigerian employers to address child labour (launched in June 2022);
 - employed the Cocoa Farmers Association of Nigeria in Ondo and the Miners Association of Nigeria in Niger to support the formalization of these sectors, and appointed focal persons to monitor the process.
- ▶ Nigeria Labour Congress and Trade Union Congress of Nigeria, in collaboration with the ILO ACCEL Africa project
 - worked to promote unionism and fundamental principles and rights at work in the agricultural and artisanal gold mining sector, mapped children of legal working age in the artisanal and small-scale gold mining and cocoa sectors in Niger and Ondo states (validated in May 2022), and developed an information toolkit for workers on fundamental principles and rights at work, and unionism in the elimination of child labour (in May 2022).

11.3 Further policy options

Ensuring an adequate legal architecture: policy options

Policy goal	Strategies and measures
Strengthen laws governing child labour as a foundation and guide for action against child labour	Ensure the registration of every child at birth so that children have a legal identity and can enjoy all of their rights from birth.
	Domesticate the Child Rights Act (2003) in the remaining states yet to do so; and the Labour Act (2004); the Criminal Code Act (2004); the Penal Code (1959); the Violence Against Persons (Prohibition) Act (2015); the Cybercrime (Prohibition, Prevention, etc.) Act (2015); and the Trafficking in Persons (Prohibition) Law Enforcement and Administration Act (2015).
	Transpose international legal standards into national legislation and practice; mapping the gap between national legislation and international legal standards can be a useful starting point for aligning national legislation with international legal standards.
	Enforce the List of Hazardous Child Labour in Nigeria developed in 2013, a list of hazardous work in keeping with the provisions of ILO Convention No. 138 on the minimum age for work and ILO Convention No. 182 on the worst forms of child labour, which Nigeria has ratified, especially in the agriculture, mining and quarrying, textile, traditional tannery, child domestic work, environment, commerce and tradition, construction, transport and manufacturing sectors.
	Ensure coherence between the laws governing the minimum age for work and those dealing with the age range for compulsory schooling.
	Ensure coherence between national laws, such as the Labour Act (2004) and the Child Rights Act (2003), and compliance with international labour standards and the Convention on the Rights of the Child on compulsory schooling.
Strengthen laws in areas pertaining to child labour	Ensure laws protecting children's rights in areas pertaining to child labour, including the right to birth registration in the National Child Policy; universal child grants in the National Social Protection Policy; free and good-quality education in the Early Childhood Educational Policy; healthcare and nutrition, and protection from violence, abuse, neglect and exploitation in the National Policy on Protection and Assistance to Trafficked Victims.
	Extend the national legal architecture to other fundamental labour rights, including freedom of association and freedom from discrimination, which are also key preconditions for ensuring children's right to freedom from child labour.
Strengthening enforcement.	Engage non-state actors (such as social workers, teachers, childcare workers, youth workers, community development workers, welfare officers and a range of other social services actors) to complement the regulatory role of public labour administrations and help extend their reach and effectiveness.
	Mobilize trade unions, the Nigeria Employers' Consultative Association, Trade Union Congress of Nigeria and Nigeria Labour Congress, to play a role in identifying child labour and supporting public labour inspectorates, through their active presence in workplaces as documented in their code of conduct.
	Facilitate the establishment of local community-based child labour monitoring systems to back public labour inspectorates to identify and follow child labour cases.

Extending social protection: policy options

Policy goals	Strategies and measures
Mitigate economic vulnerabilities associated with child labour	Ensure the extension of social protection schemes to households with children at risk of child labour, including introducing or expanding child benefits and other cash transfer programmes, such as universal child benefits, to supplement the incomes of poor households vulnerable to child labour.
	Introduce or expand in-kind transfer schemes, including food for education schemes, to help reduce household food insecurity and provide an additional incentive for school attendance; school meals can also improve student concentration and performance, meaning greater benefit from classroom time.
Mitigate the impact of other contingencies leading to a reliance on child labour	Extend health insurance access to households of children at risk of child labour to address the social distress and economic loss associated with ill health and injuries.
	Extend social protection for persons with disabilities to address the social and economic vulnerabilities associated with disabilities, including through contributory and non-contributory disability benefits, wage replacement for disabling injuries and illnesses, and the provision of social care services for people with disabilities or who suffer from long-term illness.
	Ensure income security in old age through pension schemes or similar measures to help offset the social vulnerabilities associated with ageing and help provide income security in multigenerational households.
	Extend unemployment protection to secure the income needs of households buffeted by loss of work.
Ensure adequate funding	Develop domestic resource mobilization strategies to expand fiscal space, through measures such as progressive taxation and reallocations of existing spending to prioritize children and families in situations of vulnerability.
Complementary social finance schemes^(a)	
Expand household access to credit	Introducing of micro-credit and micro-insurance schemes for vulnerable families to facilitate their access to the financial market and enable them to hedge against part of the risks they face.

Note: (a) Complementary social finance schemes are not technically part of social protection systems.

Ensuring free, good-quality schooling: policy options

Policy goal/targets	Strategies and measures
Expand access to early childhood development opportunities for vulnerable households	Advocate for more schools in communities with households of children at risk of child labour.
	Target the introduction/expansion of home outreach programmes on better parenting and caregiving.
	Target the introduction/expansion of comprehensive early childcare programmes.
Reduce direct schooling costs	Eliminate school fees through access to social protection scheme.
	Provide free uniforms and textbooks.
Reduce indirect schooling costs	Introduce/expand cash transfer programmes, including child benefits, for families with school-aged children.
	Introduce/expand in-kind transfer schemes, including food for education schemes.

Improve school quality	Address teachers' working conditions, academic freedom, violence affecting them, their migration and mobility, and institutional independence.
	Recruit well-trained teachers and teacher assistants from the local community and ensure gender balance in the teaching corps to help encourage girls to attend school.
	Engage parents and community leaders in the life of the school.
	Ensure the protection of all children, girls and boys, against violence, including sexual violence, at school.
	Reform the curriculum to improve relevance.
	Integrate digital learning into education.
Expanded school access	Target school and classroom expansion based on a needs assessment (including children with learning difficulties or with physical disabilities).
	Expand schooling hours and after-school activities as an alternative to child labour.
Ensuring adequate financing	Engage in budgetary reform to attain the common international benchmarks of allocating 15–20 per cent of public expenditure and 4–6 per cent of GDP to education.
	Prioritize spending on lower levels of education.

Promoting decent work for adults and youth of legal working age: policy options

Policy goal	Strategies and measures
Promote transition from informal to formal economy	Promote the development of sustainable micro, small and medium-sized enterprises.
	Create an enabling policy and regulatory environment that reduces barriers to formalization while protecting workers' rights.
	Promote informal entities' greater awareness of the advantages and protection that come with formalization (business development services for micro, small and medium-sized enterprises, access to the market, productive resources, credit programmes, and training and promotional programmes to upgrade informal economy units).
	Enable the self-organization of workers from the informal economy and encourage informal enterprises to join together in producers' associations, including cooperatives.
	Invest in skills development and training that is responsive both to the diverse requirements and levels of informal economy workers and to the evolving demands of the labour market, including informal apprenticeship schemes.
	Build collective representation structures for different categories of informal economy workers, to widen their collective and enable them to influence their working conditions, productivity and incomes.
Promote decent work for youth of legal working age	Enact active labour market interventions targeting young people, including training and skills development, public works engagement, job search support and other labour market services, employment subsidies, and self-employment and entrepreneurship opportunities.
	Ensure young people's rights at work so they receive equal treatment and are protected from abuse and exposure to hazards.
	Ensure young people's participation in employers' and workers' organizations and in social dialogue.

Policy goal	Strategies and measures
End child labour among adolescents 15–17 years old	Develop systems to provide youth removed from hazardous work with second chances to access education and training and secure decent work.
	Develop systems to provide youth removed from the worst forms of child labour with the necessary social services, such as emergency shelter, medical care, psychosocial counselling, legal support, family tracing, and assessment and post-reintegration follow-up.
	Provide training and awareness-raising about occupational safety and health to employers and their young workers, master craftworkers and their apprentices, and trade union occupational safety and health representatives, including about adequate and consistent supervision.
	Mobilize trade unions, business associations, chambers of commerce, community organizations and social protection agencies in monitoring minimum age guidelines and the safety of the workplace and its adolescent workers, in conjunction with the labour inspectorate.
	Institute “strategic inspection plans” to help identify workplace hazards facing adolescents and requiring follow-up.

Promoting adequate rural livelihoods and resilience: policy options

Policy goal	Strategies and measures
Promote decent rural livelihoods	Promote small producers’ associations and democratic cooperatives as means of boosting market and bargaining power in agricultural value chains, upholding price stability, and of pooling adult labour resources, inputs, tools and other facilities.
	Strengthen the collective, representative voice of those who earn their livelihoods in the rural economy, including for collective bargaining with employers, not least in plantation agriculture, and for product price negotiations to improve adult incomes.
	Improve family farms’ and enterprises’ access to inputs and credit, including through the development of community savings and credit unions.
	Introduce sustainable and appropriate technologies and alternative practices in family farms and enterprises to improve productivity and viability.
	Invest in food processing and infrastructure to add quality and value to locally grown produce.
Promote rural resilience	Develop social protection strategies combining contributory social insurance and tax-based social assistance to ensure the adequate protection of rural populations throughout their lives, including in confronting risks and contingencies specific to rural areas.
	Invest in developing the skills of rural youth, to bolster farm productivity and contribute to a structural shift towards higher-value-added manufacturing and services.
	Engage in employment-intensive investment in rural infrastructure and basic services, such as water and power systems, to offer jobs off the farm while improving farm productivity and reducing the need for tasks often performed by children, such as hauling water and gathering fuel.

► Annexes

Annex 1. Findings

*All calculations are based on the Nigeria Child Labour and Forced Labour Survey 2022.

Characteristics of the child population

Child labour prevalence

► Table A.6. Children in child labour by work category (% and number of children 5 to 17 years old in economic activity, child labour and hazardous work, by age group)

Work category	Age group							
	5–11 years old		12–14 years old		15–17 years old		Total 5–17 years old(a)	
	%	No.	%	No.	%	No.	%	No.
Total	58.6	36 832 561	22.0	13 865 523	19.4	12 202 395	100.0	62 900 479
In economic activity	40.7	14 990 674	61.9	8 583 312	67.1	8 182 316	50.5	31 756 302
In child labour	40.7	14 990 674	37.0	5 132 574	37.3	4 550 237	39.2	24 673 485
In hazardous work	15.8	5 824 667	29.0	4 015 447	37.3	4 550 237	22.9	14 390 353

Notes: (a) Child labour for this age group consists of hazardous work. Working children are considered to be in hazardous work if they are found to be in any one of the following categories: children working in designated hazardous industries (mining, quarrying and construction); children working in designated hazardous occupations (they refer to the list of hazardous work established by the national legislation); children working long hours (42 hours or more per week); children working under other hazardous conditions such as night work, using hazardous tools and being in an unhealthy work environment.

► Table A.7. Distribution of children in child labour by age group (% and number of children in child labour in each age group)

children in child labour	Age group							
	5–11 years old		12–14 years old		15–17 years old		Total 5–17 years old(a)	
	%	No.	%	No.	%	No.	%	No.
Total	60.8	14,990,674	20.8	5,132,574	18.4	4,550,237	100	24,673,485

► Table A.8. Children in economic activity (% and number of children 5 to 17 years old in economic activity, by age group, sex, residence and region)

Annex 2. Survey methodology

This annex describes the methodology used in the Nigeria Child Labour and Forced Labour Survey (NCFLS) 2022. It explains the scope and coverage of the survey, sampling design, field operations, data processing, response rates, weighting and the survey limitations.

Scope and coverage

The Nigeria Child Labour Survey is a household-based survey; the target population comprises households and children in Nigeria's households. It was conducted as a stand-alone survey primarily concerned with children's activities and child labour topics, characterized by its single-subject focus. The survey was carried out to produce estimates at the national, regional and state levels.

A total of 16,650 households from 1,110 enumeration areas (EAs) distributed across Nigeria's 36 states and Federal Capital Territory (FCT), Abuja were targeted. It covered both urban and rural households.

Questionnaire

The questionnaire followed the model developed by ILO, comprised of three main parts. The first part covered all household members' socio-demographic characteristics, economic activities and perceptions of children's parents or guardians about child labour. The second part collected

information on housing and accommodation, while the third part focused on children's education, working status, health and welfare in employment as well as their safety in the workplace.

The questionnaire comprised eight sections:

- Section A: Identification
- Section B: Household roster and demographics
- Section C: Education
- Section D: Forms of work
- Section E: Hazardous work
- Section F: Household tasks
- Section G: Forced labour
- Section H: Housing

Sampling design and implementation

Sampling frame

The sample design for the survey was based on the National Integrated Survey of Households (NISH) master sample design developed by the NBS. This was developed from the frame of EAs demarcated by the National Population Commission for the 2006 housing and population

census. The NISH design employed a replicated sampling design, a technique by which many samples (replicates) were selected independently from a population such that each replicate sample represents the population.

Basically, the NISH sample design is a two-stage, replicated and rotated cluster sample design with EAs as the primary sampling units, and households as the secondary sampling units. Generally, for each Nigerian state and the FCT, the NISH master sample is made up of 200 EAs drawn into 20 replicates. A replicate consists of ten EAs.

Sample size

The calculation of the sample size used the design effect of 1.2. Other parameters for the sample size calculation included the predicted value of the prevalence rate (40 per cent); the relative margin of error at 95 per cent confidence (5 per cent); the proportion of the target population in the base population (36.07 per cent); the average household size (5.06); and the expected response rate of households (95 per cent). The sample size of the survey was designed to provide state estimates of the prevalence of child labour with standard errors of about 1 per cent [$r \cdot RME/2 = 40\% \cdot 5\%/2 = 1\%$] under simple random sampling (RME = relative margin of error).

Sampling design

The sample design of the survey was based on a stratified two-stage sampling technique. In the first stage of sampling, 30 EAs were selected as part of a master sample in each of the 36 states and the FCT. In total, 1,110 EAs formed the primary sampling units of the survey. In the second stage, 15 households were systematically selected in each of the EAs. The target sample size was 16,650 households. All children 5 to 17 years old living in the households were interviewed.

Training and fieldwork

Two levels of training were organized. The first level was the training of trainers conducted from 28 to 30 March 2022. At this level, the participants trained were NBS and Federal Ministry of Labour and Employment staff and other members of the technical committee, who served as trainers for the second level of training as well as monitors/

quality assurance officers during the fieldwork. The participants included 74 trainers, 12 coordinators and other stakeholders. The training lasted three days.

Training of interviewers and supervisors

The second level of the training was the training of field personnel carried out from 4 to 6 April 2022. At this level, the training of field personnel took place in the 36 states and the FCT. In total, 444 field personnel (111 team leads and 333 team-mates), 37 state officers and six zonal controllers were trained nationwide. To ensure quality data collection, experienced field staff were engaged due to the sensitivity and peculiarity of the survey. Training sessions for the field personnel included an overview of the survey and its objectives, techniques for interviewing, a detailed description of all questionnaire sections, computer-assisted personal interviewing (CAPI) training and mock interviews. The training lasted three days.

Fieldwork

The selection criteria considered during the recruitment process were education level (having at least a National Diploma), knowledge of the local language and experience of data collection in similar national surveys.

A total of 12 field personnel were engaged in each state and the FCT. Three teams comprising three teammates and one team lead were constituted. The teams worked in a roving manner by completing interviews in one EA before moving to the next, until the ten EAs assigned to each team were completed. The fieldwork lasted 12 days including travelling time from one EA to the next and from one local government area to another as well as the time for callbacks to the households from 7 to 20 April 2022. Data was collected using CAPI devices and transmitted to the NBS server in real time online.

Data processing

The questionnaire was programmed using the Census and Survey Processing System software and CAPI for data capturing. A team responsible for data quality protocols was established for real-time online data checks, comprising a data administrator, who ensured the connectivity of CAPI

devices to the server and monitored the downloading and uploading of data to and from enumerators in the field, as well as data editors, who checked for errors in the data downloaded from the server and communicated any corrections or requested clarification from the enumerators.

Data cleaning and analysis using Stata

After the data was downloaded from the web-based system, a process of data cleaning was performed to prepare the data for the statistical analysis. This process implied the creation of unique datasets including household and individual information to allow for an analysis of children's activities by variables describing the household's context. Data cleaning was performed by an expert using Stata statistical software. Moreover, the results in this report accounted for the complex sampling strategy by considering clustering, stratification and weighting. According to the sampling strategy, estimates and standard errors were adjusted using the survey weights.

Response rates and weighting

Response rates

The sample of the 2022 NCFLS was targeted at 16,650 households but the number of households interviewed was slightly lower than anticipated due to some non-response cases. Many factors caused the non-response cases, such as the change of location of some households and the unavailability of household members for

interviews, among others. In total 16,418 households were visited and interviewed, which represents a response rate of 98.6 per cent.

Weighting

The probability weight of the household was produced by taking the inverse of the probability to select the household (probability products obtained at each sampling stage). Weights were calculated by multiplying the probability of selection of EAs by the probability of selecting the households within the EAs and then taking the inverse of the product. An adjustment was made for non-responses before the final weight was applied to the dataset. Final weight values were further calibrated to follow the national population distribution by state.

Limitations and lessons learned

Given that the NCFLS is a household-based survey, it only captured information about children living in households, excluding children living on the street, in orphanages, in institutions, etc. This could have implications for the results, as these children may be more vulnerable to other types of child labour. To fully understand the situation of children in child labour, it would be insightful to complement the NCFLS findings with additional studies covering the groups of children not included in this survey. In addition, while the survey captures household chores performed by children, the data does not allow an examination of the time spent doing household chores, which is essential information to fully understand the impact of these chores on children's development.
